

Fish & Wildlife Internships

with JBLM Public Works Environmental Division

JBLM holds 92,000 acres of western Washington's most intact lowland habitats, and the JBLM Fish and Wildlife Program is actively engaged in landscape-scale habitat restoration for over 35 species of threatened animals.

This internship is designed to build careers in environmental management, ecological restoration, conservation forestry, and environmental science/studies. Full time positions are available for active-duty personnel who retiring or preparing to transition out of the military. You will work side by side with college students and professional biologists, and can earn a certificate and professional reference from our program. Activities include:

- oak woodland restoration
- owl habitat enhancement
- amphibian surveys
- power tools & heavy equipment
- habitat mapping
- winter bat surveys
- prescribed fire management
- mammal population monitoring
- bluebird & wood duck monitoring
- invasive species control
- native seed collection
- ecological research
- forestry/timber management
- lots more
